

SmartCAN News

Next week we will introduce Version 29 and it will include the new 2015 Ford Mondeo, as well as the very latest Volkswagen Passat

Mondeo

None of the towing recoders yet cover the Mondeo, but SmartCAN will automatically operate all the lights and turn of the car fog light while towing. C2 may not be available without recoding but the SmartCAN module does support a buzzer.

Passat

Coding is available for the Passat, so all the towing functions can be set up.

Application List

We will issue the Version 29 application list next week. It will also show the Renault models we recently introduced.

Feedback

Your feedback on fitting issues and fitting hints are always welcome and they help us keep the website database up-to-date. So please keep them coming.

The database is at

<http://www.rydertowing.co.uk/vehicle-data/sheets>

We're updating our splice connector range to save you money.

1. Basic red and blue connectors

Now re-sourced and brought back to a really good quality. You can use these as your standard, confident that they are reliable and well-made. The prices will suit you too:

TV209B Blue Quicksplice for cables 1.0mm² to 2mm²

TV208 Red Quicksplice for cables – 0.5mm² to 0.75mm²

2. Superior red and blue connectors

TV208W, red double splice now comes in bags of 500 and is much less expensive.

TV209K This blue connector has grease in the splice chambers. This is ideal when damp is likely to be present, as it will protect against electrolytic corrosion

TV208W and TV209K have new features that improve their fitting security.

The opening for the running cable is on the connector's "closed" side. Once the connector has been pushed onto the cable, it is closed to keep the cable in line with the splice.

When the tap wire is inserted, it can be seen to be fully inserted within the connector before the splice is clamped down.

The splice chambers of the blue TV209K are filled with grease so the connection can withstand damp. The opening for the running cable is closed initially and has to be opened to allow the running wire to enter.

3. **Red, Blue, Brown and Yellow 3M Scotchloks are still in stock.**

We've also extended our PosiTap Connector range to include Red PosiTaps for 0.4 to 0.65mm² cable

This size is now supplied with our SmartCAN module.

It makes the perfect professional connection in this critical application and, just like the SuperSplice, is easily reversible/removable.

The others in the range are:

Black PosiTaps for 2.7 to 6mm² cable

Yellow PosiTaps for 3.0 to 8.0 mm² cable

These two have become very popular for making high quality detachable connections to larger cables.

SuperSplice , the neatest way to make multiple connections

It's a very long time since we first developed the SuperSplice system and many customers have been using it for years. It's possible, though, that many of you don't really know about it, so here's a link to the web page:

<http://www.rydertowing.co.uk/products/connectors-fuses/supersplice-connectors>

It really is the neatest and quickest way to make a multiple connection, so it's worth a look.
