

## Need a dedicated kit? Choose SmartCAN

**The most cost-effective and easy to fit CANbus system, perfect for 2015**

### Cost-effective

SmartCAN is the most competitively priced CANbus system, especially if you take into account the built-in Combi function

### Easy to fit

With PosiTap connection to the vehicle's CAN wires and PowerTap plug-in power source, SmartCAN is even quicker than fitting a bypass.

### Built-in Combi function

The built-in Combi function is controlled through the CAN by the engine revs, so there are no voltage-drop issues in cars with smart charging

### Cheap to stock

There's no need to carry many different kits to cover a range of cars. With SmartCAN you can carry just two types, Standard and GM. Between them, these cover all the vehicles on our application list (See <http://www.rydertowing.co.uk/vehicle-data/sheets>).

### Carry a roll of signal cable

Add a small roll of CANbus signal cable\* to your stock and everything else is standard towbar electrics. (\*TV152125: 50M, £19.87)

### Fully compatible and interactive with the host vehicles

Once installed, SmartCAN identifies with the vehicle and becomes dedicated. It confirms this with a regular one-second LED flash.

### Fully codeable

If the vehicle requires to be coded for towing, SmartCAN is completely compatible

## Choose SmartCAN

So, whether you are already fitting CANbus kits or think it's time you did, this is an excellent time to choose the ideal CANbus system – SmartCAN for 2015

## Did You Know?

### Insurance and Towbars

It was reported in one of the caravan magazines recently that some insurers were turning down claims if the car concerned had had a towbar fitted and the insurance company had not been previously notified.

### Modification?

Apparently some insurers regard the towbar as a modification (even if you declare that you will be towing). This can lead, at best, to an extra fee and, at worst, to a claim being rejected.

### Always inform

The moral of this story is that it would always be safest for owners to let their insurers know when they have a towbar fitted to their vehicle.

### Pass it on

I suggest that you include this recommendation in the information pack you give to your customers when you have finished the job, and draw their attention to it.

David Ryder

P.S. I've just phoned my insurer to check about the bar on my car
